

Description

A child, Lewis Montgomery, is brought to the clinic on Feb 28, 2011 for a well child visit. The clinic staff collects basic identifying information, including name, birth date, and sex. A clinician reviews the patient's vaccination history and determines that the child previously received a HPV vaccine on Feb 15, 2011. A clinician staff enters the patient demographic information and historical vaccination information into the EHR and transmits it to the IIS.

NO PostCondition.

TestObjectives

This test case examines the ability of an EHR to create a VXU message for well child visit reporting historical vaccination. A typical populated message for this test case must provide; -Patient demographic information in the PID segment, -Historical vaccine information in the RXA segment; RXA.3 and RXA.5 must be populated with the vaccine and the date the vaccine was administered and the RXA-9 segment must indicate that the record is based on historical information. The test case provides an example of the patient information, and historical vaccination administration information.
